Abstract

“Ximera begins where \TeX ends.” The `ximera` class aids in the creation of hand-outs, worksheets, exercises, and sections of textbooks to be used either individually or “glued” together via a `xourse` file. All `ximera` documents can be deployed in an online interactive form via `xake`. See: [Ximera Project](#) and the source code on [GitHub](#).

1 Introduction

Ximera, pronounced “chimera,” (**X**imera: **I**nteractive, **M**athematics, **E**Resources, for **A**ll) is an open-source platform that provides tools for authoring and publishing (PDF and Online), open-source, interactive educational content, such as textbooks, assessments, and online courses. The Ximera document class provides the following features:

Formatting for different domains The Ximera document class provides built-in support for formatting documents in both PDF and online formats, which can be a big time-saver for authors. Additionally, it allows for the simultaneous creation of solution manuals and teaching editions, which can be especially useful for educators.

Compiling individually or as a whole With the Ximera document class, authors can easily compile individual documents or an entire collection of documents. This flexibility can be helpful when making changes to specific documents without having to re-compile the entire collection. Moreover, this allows an author to share large portions of a text with another, with minimal changes.

Interactive content The Ximera document class allows for the inclusion of interactive content, such as answer boxes that are validated by a client-side computer algebra system. Additionally, it allows for the embedding of YouTube videos, Desmos graphs, and GeoGebra interactives.

All content displayed By default, the Ximera document class displays all content to the author. This means the author sees what the students see, along with answers and solutions, and links (that can be checked) to various interactive elements (when deployed, the interactive elements are truly embedded). This can be especially helpful for catching errors or inconsistencies in the content.

2.1 Options for the class

We start by listing the options for the ximera document class. Note, since the xourse class is based on the ximera class, all listed options are available there too.

```
6 \classXimera
```

The default behavior of the class is to display **all** content. This means that if any questions are asked, all answers are shown. Moreover, some content will only have a meaningful presentation when displayed online. When compiled without any options, this content will be shown too. This option will suppress such content and generate a reasonable printable “handout.”

```
7 \newif\ifhandout
8 \handoutfalse
9 \DeclareOption{handout}{\handouttrue}
```

By default, authors are listed at the bottom of the first page of a document. This option will suppress the listing of the authors.

```
10 \newif\ifnoauthor
11 \noauthorfalse
12 \DeclareOption{noauthor}{\noauthortrue}
```

By default, learning outcomes are listed at the bottom of the first page of a document. This option will suppress the listing of the learning outcomes.

```
13 \newif\ifnooutcomes
14 \nooutcomesfalse
15 \DeclareOption{nooutcomes}{\nooutcomesttrue}
```

instructornotes This option will turn on (and off) notes written for the instructor.

```
16 \newif\ifinstructornotes

18 \DeclareOption{instructornotes}{\instructornotesttrue}
```

noinstructornotes This option will turn off (and on) notes written for the instructor.

hints When the **handout** options is used, hints are not shown. This option will make hints visible in handout mode.

```

2.2 Loading packages

Since we want `\cancel` to work, we load it here to avoid polluting the `.jax` output.

```
67 \RequirePackage[makeroom]{cancel}
```

Quite a few packages are required by the document class. This is a list of required packages. As packages are added to this list, we should include a comment as to where they are being utilized. This will help keep this list from being redundant and/or outdated.

```

68 \RequirePackage[inline]{enumitem}
69 \RequirePackage[pagestyles]{titlesec}
70 \RequirePackage{titletoc}
71 \RequirePackage{titling}
72 \RequirePackage{url}
73 \RequirePackage[table]{xcolor}
74 \RequirePackage{tikz}
75 \RequirePackage{pgfplots}
76 \usepgfplotslibrary{groupplots}
77 \usetikzlibrary{calc}
78 \RequirePackage{fancyvrb}

```

Load `forloop` for the problem environment dynamic naming and building.

```
79 \RequirePackage{forloop}
```

Now we load even more packages.

```
80 \RequirePackage{environ}% Included to allow saving of environment contents. This does *not* p
81 \RequirePackage{amssymb}% Included to have access to math typeset.
82 \RequirePackage{amsmath}% Included to have access to math typeset.

85 \RequirePackage{multido}% http://ctan.org/pkg/multido
86 \RequirePackage{listings} %% is this required???
87
88 \RequirePackage{xkeyval}
89
90 \RequirePackage{currfile}
91 \RequirePackage{comment}
92 \end{classXimera}
```

Various packages must be loaded early to avoid polluting the `.jax` file.

```
93 \begin{classXimera}
94 \RequirePackage{getttitlestring}
95 \RequirePackage{nameref}
96 \RequirePackage{epstopdf}
97 \end{classXimera}
```

2.3 Page setup

We want non-indented spaced-out paragraphs.

```
98 \begin{classXimera}
99 \setlength{\parindent}{0pt}
100 \setlength{\parskip}{5pt}
101 \end{classXimera}
```

To avoid weird margins in 2-sided mode, change the margins.

```
102 \begin{classXimera}
103 \oddsidemargin 62pt
104 \evensidemargin 62pt
105 \textwidth 345pt
106 \headheight 14pt
107 \end{classXimera}
```

On the HTML side, there is more complicated page setup to perform.

```

2.4.2 Theorem and theorem-like environments

On the web, a theorem is emitted as a special <div>.

```

163 \newcommand{\ConfigureTheoremEnv}[1]{%
164 \renewenvironment{#1}[1][]{\refstepcounter{problem}%

169 }
170 </htXimera>
171 <classXimera>\theoremstyle{definition} % No italic (because this makes also text in TikZ italic

```

The key is to make sure that the theorem environments are defined in a corresponding fashion on the web and on paper.

2.5.6 Only in HTML or PDF

Ximera provides several techniques to display some content only in the PDF, or only online. The `prompt` environment can be used to hide the data-entry part of a problem from the PDF: it's contents only get displayed online.

The lower level commands `\pdfOnly` and `\htmlOnly` also limit the output to either PDF or online, similarly to the environments `onlyPdf` and `onlyHtml`.

If `\xmPrintHtmlOnlyAlsoInPdf` is set, the online/html only things are printed in the PDF anyway (e.g. for review).

Unfortunately it is not possible in L^AT_EX to have a command and an environment with the same name. We opted for the above (confusing...) names.

For backward compatibility, the deprecated environment `onlineOnly` is identical to `onlyHtml`.

For more advanced usage also commands `\ifonline` and `ifonlineTF` are provided.

The technique used to distinguish between the PDF-version and the online HTML-version is always the existence of the TeX4ht macro `\HCode`. Older distinctions such as `\ifxake`, `ifhandout` or `\iftikzexport` should no longer be used for this purpose.

In the future we need this to (optionally) be displayed in the problem, while the actual code lives in the solution. Here is how this could be implemented: Like the `title/maketitle` commands, the `multiple-choice` could be stored in `\themultiplechoice`, flip a boolean, and execute `\makemultiplechoice` at the `\end` of the problem. We should also make a command called `\showchoices` that will show choices in the handout.

On the web, `selectAll` is handled just like `multipleChoice`.

2.12.2 Feedback

feedback (*env.*) An initially hidden environment that uncovers itself at an appropriate time. New Validator rewrite code added by Jason Nowell. Original code provided by Jim Fowler. Validator is an environment designed to run a custom check on answers (usually) using javascript code.

Define a placeholder command for validator and feedback.

```
1395 \newcommand{\PH@Command}{}
1396 \newcommand{\PH@Command}{}{}
```

Validator should take an argument and detokenize it and display it at the start of the environment. The original Validator environment had everything framed in an mbox; presumably to make the text look a bit nicer, although this seems redundant with `texttt`. It shouldn't cause any harm so I have left it in for now.

```
1397 \newenvironment{validator}[1][]{
1398   \def\PH@Command{#1}% Use PH@Command to hold the content and be a target for "\expandafter"
1399   \mbox{\texttt{\detokenize\expandafter{\PH@Command}}}% Now expand PH@Command once and then
1400 }{}
```

First, if it's a handout, we want feedback to eat everything and then disappear entirely. So we do this:

```
1401 \ifhandout%
1402 \newenvironment{feedback}
1403   {}
1404   \setbox0\vbox\bgroup
1405   }
1406   {}
1407   \egroup
1408   }
```

If this isn't a handout, then we want to display the Feedback by using a label, positioned and formatted as a `\item` in a trivlist. It is important that we also detokenize the content of the optional argument, as it is likely to contain javascript or other code that latex won't be able to make sense of.

```
1409 \else
1410 \newenvironment{feedback}[1][attempt]{
1411
1412   \edef\PH@Command{\GetTranslation{#1}}% Use PH@Command to hold the content and be a target for
1413
1414   \begin{trivlist}% Begin the trivlist to use formatting of the "Feedback" label.
1415     \item[\hspace{1em}\labelsep\small\slshape\bfseries \GetTranslation{feedback}]% Format the "Feedback"
1416     (\texttt{\expandafter\detokenize\expandafter{\PH@Command}}):% Format (and detokenize) the content
1417     \hspace{2em}\small\slshape% Insert some space before the actual feedback given.
1418   }{
1419     \end{trivlist}
1420   }
1421
1422   \fi
1423 \end{classXimera}
```

Feedback environments take an optional parameter (which describes when the feedback is to be provided)

```
1424 \newenvironment{feedback}[1][attempt]{
1425   \def\feedback{\ifnextchar[{\@feedbackcode}{\@feedbackattempt}}
1426   \def\@feedbackattempt{\@feedbackcode[attempt]}

1433 }{\htXimera}
```

2.12.3 Ungraded activities

`ungraded (env.)` The `ungraded` environment is used to record that certain parts of activities should not be worth points. For example, if you want to use a `multipleChoice` as a survey question, you can place it inside an `ungraded` environment. On the L^AT_EX side, the `ungraded` environment does nothing.

```
1434 \*classXimera>
1435 \newenvironment{ungraded}{}{}
1436 \*classXimera>
```

But on the html side, `ungraded` wraps the activities in a `div` in order to assign some weight to them for grading.

```
1437 \*htXimera>
1438 \renewenvironment{ungraded}{%
1439 \ifvmode \IgnorePar\fi \EndP\HCode{<div class="ungraded">}\IgnoreIndent%
1440 }{
1441 \ifvmode \IgnorePar\fi \EndP\HCode{</div>}\IgnoreIndent%

2.13 Support for the web

2.13.1 MathJax support

When using mathjax, dump all the `\newcommands` to a `.jax` file.

First, create the `.jax` file. Redefine newcommand appropriately.

2.14.1 Suppress

3.1 Activities

The core of the xourse system. It works by redefining the `document` environment, thus making the `\begin` and `\end{document}` of the subfile ‘transparent’ to the inclusion. The redefinition of `\documentclass` is analogous, just having a required and an optional arguments which mean nothing to `\subfile`.

```

1562 \end{classXourse}
1563 \newcommandf\skip@preamble}{%
1564 \let\document\relax\let\enddocument\relax%
1565 \newenvironment{document}{\let\input\otherinput}{}%
1566 \renewcommand{\documentclass}[2][subfiles]{%

```

Note that the new command `\subfile` calls for `\skip@preamble` *within a group*. The changes to `\document` and `\documentclass` are undone after the inclusion of the subfile.

Numbering starts a page too soon without this:

```

1567 \let\otherinput\input
Store usual \maketitle as \othermaketitle
1568 \let\othermaketitle\maketitle
\maketitle In a xourse file, \maketitle is redefined to give course packet title page and toc.
1569 \renewcommand{\maketitle}{%
1570 \pagestyle{empty}
1571 \begin{center}
1572 ~\ %puts space at top of page to move title down.

3.1.1 Regular activities

`\activity` Documents included with `\activity` will be included in the body of the xourse document. Any `\input` commands within included ximera documents will be ignored. Any `\usepackage` commands within included ximera documents will cause an error. Overlapping `\newcommand` definitions within multiple ximera documents included simultaneously will cause an error. The `\activity` command inputs the file name provided without `\documentclass`, without `\begin{document}`/`\end{document}` and without any inputs in the preamble of the included file.

`\paragraph` Paragraph commands emit spans. A small heading.

```
1665 <*cfgXimera>
1666 \renewcommand{\paragraph}[1]{%
1667 \HCode{<span class="paragraphHead">}}%
1668 #1%
1669 \HCode{</span>}\par\IgnorePar}
1670 </cfgXimera>
```

`\subparagraph` An even smaller heading.

```
1671 <*cfgXimera>
1672 \renewcommand{\subparagraph}[1]{%
1673 \HCode{<span class="subparagraphHead">}}%
1674 #1%

3.3 Grading by points

`graded (env.)` The `graded` environment does nothing in latex, but in html, it wraps the activities in a div in order to assign some weight to them for grading.

```
1677 <*classXourse>
1678 \newenvironment{graded}[1]{\{}
1679 </classXourse>
```

So indeed this environment in html wraps the activities in a div in order to assign some number of points to them.

```
1680 <*htXourse>
1681 \renewenvironment{graded}[1]{%
1682 \ifvmode \IgnorePar\fi \EndP\HCode{<div class="graded" data-weight="#1">}\IgnoreIndent%
1683 }{
1684 \ifvmode \IgnorePar\fi \EndP\HCode{</div>}\IgnoreIndent%
1685 }
1686 </htXourse>
```

3.4 Logos

`\logo` A logo for the xourse.

```
1687 <*classXourse>
1688 \newcommand*{\logo}[1]{%
1689 \ifx\@onlypreamble\@notprerr
1690 \ClassError{xourse}{logo can only be used in the preamble}
1691 {Move your logo command to the preamble}
1692 \else %
1693 \IfFileExists{#1}%
1694 {\gdef\xourse@logo{#1}}%
1695 {\ClassError{xourse}{logo file does not exist}}
```

```

1696      {To use logo, make sure that the referenced image file exists}}%
1697   \fi%
1698 }
1699
1700 </classXourse>

```

The xourse logo is an `og:image` in the `opengraph` taxonomy.

```

1701 <*htXourse>
1702 \Configure{@HEAD}{%
1703   \HCode{<meta name="og:image" content="}%
1704   \ifdefined\xourse@logo%
1705     \xourse@logo%
1706   \fi%
1707   \HCode{" />\Hnewline}}%
1708 </htXourse>

```
